Quiz answer boxes: phantom arrays

Every entry is an invisible `MMM` set at 24 pt. Arguments are {`rows`}{`columns`}{`pts`}{`letters`}; the augmented column count includes the right-hand column.

```
\AnswerBox{2}{3}{24}{MMM}
   \MatrixAnswerBox{2}{3}{24}{MMM}
   \AugmentedAnswerBox{2}{3}{24}{MMM}
```

The outer box uses the standard `\boxed` command from `amsmath`, with its default gap (`\fboxsep`, normally 3 pt). Parentheses and the augmentation rule are standard LaTeX array notation. Sizes now follow the 24 pt `MMM` block rather than a prescribed golden ratio. All macro definitions are included at the top of this file.
