Worksheet answer boxes

Use {rows}{columns}{points}{sample text}. Cell size is the larger of the sample width and the scaled point size, plus padding. The sample stays invisible. Adjust the three spacing settings above to change the look.

`\MatrixAnswerBox{3}{3}{24}{00}` gives a square matrix writing area.
`\VectorAnswerBox{3}{24}{00}` has the same height and one-column width.
`\AugmentedAnswerBox{3}{4}{24}{00}` adds one RHS column to a square left block.

Boxes use standard `\boxed` padding. Parentheses surround the writing region; the augmented divider stays visible.
